Firmenbeschreibung

Nexopt was created in 2016, in response to a specific request coming from a large government customer. After trying many telematics providers in Europe, they remained unhappy with the cost, flexibility and usability of these products. We therefore decided to create a solution tailored to their needs.

Backed by 25 years of engineering and production experience with additional electronics for engine control systems – we have the background, experience and working knowledge to provide you with greater monitoring, control and reporting functionality than traditional telematics programs.

We have been working with customers in construction, forestry, farming, trucking and general contracting. We understand the need for reliability and a common sense approach to know how to manage and monitor your fleet.
